DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1,2 and 5-21 are rejected under 35 U.S.C. 102(b) as being anticipated by O'Halloran et al. (U.S. Patent Number 5,992,161).

O'Halloran et al. disclose an air handler control temperature, humidity and/or cleanliness of air. O'Halloran et al. also disclose dehumidification is often advantageous during plant construction. Referring to FIG. 1, there is shown a block diagram illustrating a conventional make-up air handler 100, which comprises a preheating coil 102, a humidifier 104, a primary cooling coil 106, a secondary cooling coil 108, a heating coil 110 and a filter 112. The preheating coil 102 heats the incoming air when the air is colder than a predetermined temperature. The preheating coil 102 is a conventional preheat coil. The humidifier 104 adds moisture to the air when the air is dryer than a predetermined wet bulb humidifier. The humidifier 104 is a conventional humidifier. The primary cooling coil 106 cools incoming warm, moist air to a preset temperature. The incoming air is typically in a wide temperature range because of seasonal variations. This cooling is performed when the ambient air temperature is warmer than the preset temperature. The primary cooling coil 106 includes a series of coils using chilled water from a remote utility plant (not shown). The secondary cooling

Application/Control Number: 10/621,859

Art Unit: 3744

coil 108 further cools the air to a target dew point temperature that is associated with a desired humidity.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-7,12,13,14,15 and 20-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson (U.S. Patent Number 5,212,958).

Anderson discloses a dehumidifier apparatus for automatic and continuous emptying of water condensate. Portable dehumidifiers have been found useful in controlling the moisture in the air contained in interior rooms of buildings. Referring to Figs. 1 and 2, the apparatus comprises a dehumidifier 22, blower 24 and a humidistat control 34. The purpose of the dehumidifier is to reduce the moisture at the area. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the apparatus for construction project such as remodeling office or house.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chen-Wen Jiang whose telephone number is (703) 308-0275. The examiner can normally be reached on Tuesday-Friday from 7:00 to 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Denise Esquivel can be reached on (703) 308-2597. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
